JP Morgan Chase & Co.
270 Park Avenue
New York City, New York 10172

Dear Hiring Team @ JP Morgan Chase & Co,

Hello, my name is Justin Lee and I am a rising senior at Boston College. As a soon-to-be graduate from Boston College, I will be graduating with a Bachelor of Arts in Computer Science. I am writing to express my high interest in the 2025 Tech Connect Program at JPMorgan Chase & Co.

To give you a bit of background on my college journey, I came into college without a clear vision of what I wanted to do for the rest of my life. I tested out a bunch of different fields, but I chose Computer Science because it challenged me the most. Naturally, I became really interested in learning to build software solutions that can have a direct positive impact on the lives of others.

For the past 8 months of my life, I have dedicated my life to learning as much as possible about building software through school, self-studying and my current internship. Throughout this mix of academic and professional experience, I have built a strong foundation in software development through project-based learning, coursework and internship experience as well as honing my problem-solving abilities. Most importantly (and often most underrated), I practiced and improved important soft skills such as leadership, communication and teamwork which are crucial parts of being a good software engineer.

One thing I have always lacked during my journey to becoming a software engineer is a strong community. The Tech Connect program is really appealing to me because not only does it provide me with more real-world experience and new projects to learn from, but it also provides me with mentors (SMEs), and a collaborative environment which are two things I really cherish in a community. I am confident in my passion for software engineering, proactivity and my desire to learn as much as possible, which I strongly believe make me a strong fit for your program.

A showcase of my proactive tendencies when building software include the project I worked on for the Boston College Computer Science Department, where I co-developed a fully functional four-year course planning web application that assists over 9000 students and staff in course selection and scheduling. This project involved full-stack development, utilizing a dynamic JavaScript frontend, Django/Python backend, and an SQLite database. This hands-on experience has not only honed my technical skills but also taught me the importance of collaboration and the basics of agile development practices.

Furthermore, my internship at Teamworks is providing me with practical experience in Python and Flask, where I am contributing to the development of a new travel module feature for the backend API. Additionally, leading the development of a SaaS product as the Chief Technology Officer at Content

Academy, I learned to identify market trends, respond to customer feedback, and drive product efficiency which resulted in direct revenue increase for the company.

I am eager to bring my technical skills, innovative mindset, and enthusiasm for technology to JPMorgan Chase & Co. I look forward to the opportunity to discuss how my background, skills, and ambitions align with the goals of the Tech Connect Program.

Thank you for considering my application. I am excited about the possibility of contributing to JPMorgan Chase's mission and vision.

Sincerely,

Justin Lee
